Quick Setup of ZeboraCam

More Info at WWW.ZEBORAGROUP.COM download center

If you just receive the camera, please follow below step by step:

1. Download the APP " ZeboraCam" in your   cellphone/tablet.

2. Power on the camera. No Ethernet cable required.

3. After the camera stop moving, in your smart phone, click "Settings >>Wi-Fi", click the camera ID"CMxxx" to connect to your Wi-Fi. Wait about 10 sec for your device to change from data to Wi-Fi signal.

4. Open ZeboraCam, click "Add Camera >> Add Wi-Fi Connected Camera", Click "Search(LAN)" (Recommended) or scan the QR code from the bottom of camera to acquire the camera ID. Input the camera default password 8888, and click "Apply". Your camera now shows **"online"** in device list.

5. In ZeboraCam, click "Settings >> Management >> Wi-Fi Settings", select your Wi-Fi network from the list and input Wi-Fi password, click "Apply", the camera will reboot automatically.

6. Waiting for about 30 sec, and you will hear the beep sound from the camera, which means the Wi-Fi is connected. You are now all set. You can click the CMxx in the device list to view the live video and control by sliding your screen.

1. Open ZeboraCam on your devices. If you already added camera ID (CMxx) to device list, click (i) which is next to CMxx to delete IP camera.

2. Reset the camera. (Use the provided Pin or toothpick, stick into the reset button at the bottom of the camera, press and hold about 10 sec until "Ding…")

3. After the camera stop moving, in your smart phone, click "Setings >>Wi-Fi", click the camera ID"CMxxx" to connect to your Wi-Fi. Wait about 10 sec for your device to change from data to Wi-Fi signal.

4. Open ZeboraCam, click "Add Camera >> Add Wi-Fi Connected Camera". Click "Search (LAN)" or scan the QR code from the bottom of camera to acquire the camera ID. Input the camera default password 8888, then click "Apply". Your camera now shows **"online"** in device list.

5. In ZeboraCam, click "Setting >> Management >> Wi-Fi Settings", select your Wi-Fi network from the list and input Wi-Fi password, click "Apply", the camera then will reboot automatically.

6. Waiting for about 30 sec, and you will hear the beep sound from the camera, which means the Wi-Fi is connected. You are all set now.

1. On your second device, download the App "ZeboraCam".

2. Open ZeboraCam, click "Add Camera >> Add Wi-Fi Connected Camera". Click "Search (LAN)" (Recommended) or scan the QR code from the bottom of camera to acquire the camera ID. Input the camera password (need to be the same password as your first device, if you didn't change it is 8888), then click "Apply". Your camera now shows **"online"** in device list, and you are all set.

TIPs

1.   If you cannot find your Wi-Fi from the list in ZeboraCam App, please change your Wi-Fi from 5.0GHz to 2.4GHz.

2.   Make sure your Wi-Fi security is WAP or WAP 2 based but not WEP when you start installation on your computer.

3.   If you try above but still have problems. PLEASE unplug your router from power, and rest it for about 5 min, then power on the router again. Reboot your cellphone as well.
